

Secondary Twist Wire Spreader Tool

ST-2

Our patented ST-2 secondary twist wire spreader tool makes quick work of installing twist wire spacers. This mostly composite tool functions by combining the use of leverage and our own specially designed separator blades to divide and spread 1/0 to 4/0 twist wire to a distance of 7+ inches in one quick and easy motion.

Installation times typically are in the 30 to 45 second range for installing two spacers. As the old saying goes, "This tool literally pays for itself!" Step-by-step instructions with photos are provided with each tool. A DVD is also available that shows how the ST-2 works on both 3 and 4 conductor twist wire.
